

## **STRATA Networks**

### **Broadband Internet Access Services**

#### **Network Management Practices, Performance Characteristics, and**

#### **Commercial Terms and Conditions for Fixed and Mobile Broadband Services**

STRATA Networks (“the Company”) has adopted the following network management practices, performance characteristics, and commercial terms and conditions for its broadband Internet access services in compliance with the Federal Communications Commission’s (“FCC’s) Open Internet Framework requirements (GN Docket No. 09-191 and WC Docket No. 07-52) and the Restoring Internet Freedom requirements (WC Docket No. 17-108).

These practices, characteristics, terms and conditions are intended to help preserve the Internet as an open framework that enables consumer choice, freedom of expression, end-user control, competition, and freedom to innovate without permission, while permitting the Company to manage its network reasonably.

The information provided below is intended for current and prospective subscribers to our services as well as providers of "edge" products (i.e., providers of applications, devices, services, and content accessed over or connected to the Company broadband Internet access service). These practices, characteristics, terms and conditions are effective as of March 22, 2018.

The Company may add, delete, or modify certain practices, performance characteristics, terms and conditions from time to time at its discretion. It will provide clear written notice of these changes on this website, but will not notify customers, content providers, applications providers, service providers or device providers individually of such changes by bill inserts, e-mails, tweets, telephone calls or other direct communications unless specifically required to do so by federal or state authorities. The Company will provide as much advance notice as practicable of such changes. It will normally endeavor to furnish written notice on this website thirty (30) days before changes become effective, but reserves the right to use a shorter notice period when regulatory, operational, technical or other circumstances warrant.

### **I. Network Management Practices**

The Company manages its network with the goal of providing the best practicable broadband Internet experience to all of its customers. Within the scope of its resources, it attempts to deploy and maintain adequate capacity and facilities within its own network, and to connect its network with the Internet. The Company and its staff use their best efforts to monitor, address and minimize (but do not guarantee that they can prevent) the effects of spam, viruses, security attacks, network congestion, and other phenomena that can degrade the service of affected customers.

#### *A. Congestion Management Practices*

Congestion is an Internet access service problem that can slow web browsing, downloading, and other activities of the customers during certain peak usage periods. This congestion may be caused by capacity limits and bottlenecks in a service provider's own network, or by limitations in the capacity of backhaul facilities and services that many service providers must purchase from unrelated entities.

From time to time, the Company will experience occasional problems with congestion.

When significant congestion problems arise, the Company's most desired approach is to determine the source of the problem, and to increase the capacity of the affected portions of its network and/or of its connections with the Internet where warranted. However, network and other facilities upgrades often cannot be accomplished instantaneously because they require negotiations, authorizations and agreements with multiple unrelated entities such as lenders, government agencies, equipment vendors, tower and other property owners and other carriers. For this reason, the Company may block certain lawful content, applications, or services.

If or when capacity upgrades are not able to be deployed on a timely or reasonable basis, the Company reserves the right to monitor and identify which customer accounts are using the greatest amount of bandwidth during periods and/or locations of heavy congestion, and to contact those "high-bandwidth customers" to work out a solution to the problem. The Company's preferred solution will be to help these high-bandwidth customers to find acceptable times and/or locations during non-peak periods to engage in the same activities.

If that preferred solution is not feasible, the Company reserves the right to manage or throttle temporarily the Internet traffic of "high-bandwidth customers" at affected locations during periods of significant congestion until such periods of congestion pass. This temporary traffic management will be accomplished by technically and commercially feasible methods that are available or that become available in the future. Affected "high-bandwidth customers" will still be able to access the Internet. However, during periods of congestion they may experience conditions such as longer times to download or upload files, slower Web browsing, and/or slower movements during online game playing.

Customers should note that any temporary traffic management practices employed by the Company will impact only identified and notified "high-bandwidth customers" during periods and/or at locations that experience congestion problems, and will not be based upon the types of content, applications, services, or devices such customers use. On the basis of its knowledge and experience, the Company expects that periods and locations of temporary traffic management, if any, will be brief and infrequent.

For purposes of its congestion management practices, the Company will consider a period in which a "congestion problem" arises and exists to be one where available bandwidth is less than typical traffic demand.

The Company may choose to prioritize affiliate traffic to improve the performance of the affiliates services. The Company has several affiliates that provide a wide range of services to customers. These affiliates include, but are not limited to, The STRATA Data Center, LLC, Spectra, LLC, and Uintah Basin Electronic Telecommunications, LLC. These affiliates provide data storage and transmission services, mobile broadband, hosted cloud applications, managed IT Services, etc.

### *B. Application-Specific Behavior Practices*

The Company does not have its own third-party application certification criteria or procedures, nor does it restrict the use of applications on its network unless they are unlawful or unless there is a reasonable belief that such applications will cause harm to its network. The Company will expeditiously inform an application developer of any decision to deny access to the Company's network of a particular application of such developer.

Customers may use any lawful and commercially available application which they desire on the Company's network.

The Company does not favor or inhibit certain applications or classes of applications.

The Company does not normally monitor the contents of the traffic or applications of its customers. It undertakes no obligation to monitor or investigate the lawfulness of the applications used by its customers. If any party contacts the Company with a substantial allegation that an application being used by a customer is unlawful, the Company will investigate the matter (including consultation, as it deems appropriate, with attorneys, consultants, federal or state regulators, and/or federal, state or local law enforcement agencies), and will take appropriate actions to deal with the use of applications that are demonstrated to be unlawful.

Customers may occasionally develop their own applications, or modify commercially available applications. The Company will not prohibit the use of customer-developed or modified applications unless there is a reasonable belief that such applications will cause harm to its network.

The Company does not block or rate-control specific protocols or protocol ports.

The Company does not modify protocol fields in ways that are not prescribed by the applicable protocol standards.

### *C. Device Attachment Rules*

The Company does not have its own third-party device certification criteria or procedures, nor does it restrict the use of devices on its network unless they are unlawful or unless there is a reasonable belief that such devices will cause harm to its network. The Company will expeditiously inform a device provider of any decision to deny access to the Company's network for a particular device of such provider.

Customers may use any lawful, compatible, type-accepted (if necessary) and commercially available device which they desire on the Company's network, as long as such device does not harm the network.

The Company does not normally monitor the devices used by its customers. It warns customers that some types of devices may not be compatible with its network.

The Company undertakes no obligation to monitor or investigate the lawfulness of the devices used by its customers. If any party contacts the Company with a substantial allegation that a device being used by a customer is unlawful, the Company will investigate the matter (including consultation, as it deems appropriate, with attorneys, consultants, federal or state regulators, and/or federal, state or local law enforcement agencies), and will take appropriate actions to deal with the use of a device that is demonstrated to be unlawful.

Customers may occasionally develop their own devices, or modify commercially available devices. The Company will not prohibit the use of lawful customer-developed or modified devices unless there is a reasonable belief that such applications will cause harm to its network.

#### *D. Security Practices*

The Company does not normally monitor the traffic of its customers. It undertakes no obligation to monitor or protect such customer traffic from spam, viruses, denial-of-service attacks, or other malicious, unlawful or unwanted activities.

The Company recognizes that customers can purchase spam filtering and anti-virus software from commercial vendors to meet their needs. The Company may from time to time offer anti-spam and/or anti-virus software or services to customers who desire to purchase them from the Company. When offered, these software or services will be described and priced in other sections of this website and in the Company's sales and marketing materials. Customers are free to obtain antispyware and/or anti-virus software or services from any source they desire, as long as such software or services do not disrupt or degrade the traffic of other customers of the Company or harm the network.

A customer that is subjected to a denial-of-service attack, or similar malicious, unlawful or unwanted activity, is urged to notify the Company as soon as possible. The Company will work with the customer, other service providers, federal and state regulators, and/or law enforcement to determine the source of such activity, and to take appropriate, and technically and economically reasonable efforts to address the matter.

The Company employs commercially appropriate security procedures to protect its network and its customer records from unauthorized access by third parties. The Company does not guarantee that it can protect customers from any and/or all security breaches.

## **II. Performance Characteristics**

Many of the service and performance characteristics of the Company's broadband Internet access services are contained in the service offering portions of this website.

#### *A. General Service Description*

The Company uses 1XEV and LTE technology in its network. The expected access speeds are consistent with those in a 1XEV and LTE technologies, depending upon RF coverage and handset capability.

Because conditions change frequently, the Company can provide estimated actual access speed and time delay (latency) information only for specific recent time periods and locations requested by a customer

### **III. Commercial Terms and Conditions**

This section provides a brief overview or reference to terms and conditions detailed elsewhere, plus discussions of other terms and conditions required by the FCC's Open Internet Framework.

#### *A. Pricing Terms and Conditions*

The Company offers different tiers and levels of service at different prices, and changes these from time to time. These service tiers and prices are detailed in the service offering portion of this website.

The Company does impose usage-based fees upon certain tiers or levels of its service. These usage based fees are imposed upon the tiers and service levels listed in wireless section of the company's website in the manner and under the conditions set forth therein.

The Company does impose fees for early termination with respect to certain of its service arrangements. These early termination fees are imposed upon the service arrangements specifically identified in the "terms & conditions" section of the company's website in the manner and under the conditions set forth therein.

The Company is willing to consider and negotiate prices for customized additional network services requested by specific customers or edge service providers if such services can be designed, developed and furnished in a commercially reasonable manner. If and when such customized services are developed and furnished, the Company reserves the right to adapt and provide them to other customers on a non-discriminatory basis so long as such subsequent provision does not entail disclosure of proprietary or confidential information of the initial customer.

#### *B. Privacy Policies*

As indicated above, the Company's network management practices do not generally entail inspection of network traffic.

The Company retains and stores certain traffic information (such as the identity of the customer using a particular IP address during a specific period) for time periods required by federal or state law.

The Company retains, stores and provides to law enforcement any traffic information requested pursuant to the procedures of the Communications Assistance for Law Enforcement Act ("CALEA"), the Foreign Intelligence Surveillance Act ("FISA") or other applicable national security or criminal statutes.

The Company does not collect, store or use traffic information to profile its customers in order to sell additional services to them, or for similar non-network management purposes.

### *C. Redress Options*

Questions and complaints regarding the foregoing matters should be addressed to the Company's Administration at (435)622-5007 or [company@stratanetworks.com](mailto:company@stratanetworks.com).

The Company strongly desires to resolve questions, complaints and other problems of its customers and edge service providers in an informal and direct manner that satisfies all interested parties to the greatest extent practicable.

Customers and edge service providers that are not able to obtain satisfaction from the Company have the option of invoking the FCC's informal and formal complaint procedures regarding Open Internet Framework disputes.

## **STRATA Networks**

### **Broadband Internet Access Services**

#### **Network Management Practices, Performance Characteristics, and**

#### **Commercial Terms and Conditions for Fixed Services**

STRATA Networks ("the Company") has adopted the following network management practices, performance characteristics, and commercial terms and conditions for its broadband Internet access services in compliance with the Federal Communications Commission's ("FCC's") Open Internet Framework requirements (GN Docket No. 09-191 and WC Docket No. 07-52).

These practices, characteristics, terms and conditions are intended to help preserve the Internet as an open framework that enables consumer choice, freedom of expression, end-user control, competition, and freedom to innovate without permission, while permitting the Company to manage its network reasonably.

The information provided below is intended for current and prospective subscribers to our services as well as providers of "edge" products (i.e., providers of applications, devices, services, and content accessed over or connected to the Company's broadband Internet access service). March 22, 2018.

The Company may add, delete, or modify certain practices, performance characteristics, terms and conditions from time to time at its discretion. It will provide clear written notice of these changes on this website, but will not notify customers, content providers, applications providers, service providers or device providers individually of such changes by bill inserts, e-mails, tweets, telephone calls or other direct communications unless specifically required to do so by federal or state authorities. The Company will provide as much advance notice as practicable of such changes. It will normally endeavor to furnish written notice on this website thirty (30) days before changes become effective, but reserves the right to use a shorter notice period when regulatory, operational, technical or other circumstances warrant.

## I. Network Management Practices

The Company manages its network with the goal of providing the best practicable broadband Internet experience to all of its customers. Within the scope of its resources, it attempts to deploy and maintain adequate capacity and facilities within its own network, and to provide sufficient Middle Mile capacity or facilities outside its service area to connect with the Internet. The Company and its staff use their best efforts to monitor, address and minimize (but do not guarantee that they can prevent) the effects of spam, viruses, security attacks, network congestion, and other phenomena that can degrade the service of affected customers.

### *A. Congestion Management Practices*

Congestion is an Internet access service problem that can slow web browsing, downloading, and other activities of the customers during certain peak usage periods. Congestion may be caused by capacity limits and bottlenecks in a service provider's own network, or by limitations in the capacity of the Middle Mile transport facilities and services that many rural service providers must purchase from unrelated entities to carry the traffic of their customers between their service areas and the closest Internet nodes.

From time to time, the Company may experience problems with congestion.

If significant congestion problems arise, the Company's most desired approach is to determine the source of the problem, and to increase the capacity of the affected portions of its network and/or of its Middle Mile routes where warranted. However, network and Middle Mile upgrades often cannot be accomplished instantaneously because they require negotiations, authorizations and agreements with multiple unrelated entities such as lenders, government agencies, equipment vendors, property owners and other carriers.

If or when network and/or Middle Mile upgrades are not able to be deployed on a timely or reasonable basis, the Company reserves the right to monitor and identify which customer accounts are using the greatest amount of bandwidth during periods of heavy congestion, and to contact those "high-volume customers" to work out a solution to the problem. The Company's preferred solution will be to help such "high-volume customers" find acceptable times during non-peak periods to engage in the same activities.

If that preferred solution is not possible, the Company reserves the right to manage temporarily the Internet traffic of "high-volume customers" during periods of significant congestion until such periods of congestion pass. This temporary traffic management will be accomplished by technically and commercially feasible methods that are available or that become available in the future. Affected "high-volume customers" will still be able to access the Internet and engage in any and all online activities they desire. However, during periods of congestion they may experience conditions such as longer times to download or upload files, slower Web surfing, and/or slower movements during online game playing.

Customers should note that any temporary traffic management practices employed by the Company will impact only identified and notified "high-volume customers" during periods when congestion

problems are experienced, and will not be based upon the types of content, applications, services, or devices such customers use. On the basis of its knowledge and experience, the

Company expects that periods of temporary traffic management, if any, will be brief and infrequent. For purposes of its congestion management practices, the Company will consider a period in which a “congestion problem” arises and exists to be one where available bandwidth is less than typical traffic demand.

### *B. Application-Specific Behavior Practices*

The Company does not favor or inhibit certain applications or classes of applications. Customers may use any lawful and commercially available application which they desire on the Company’s network.

The Company does not normally monitor the contents of the traffic or applications of its customers. It undertakes no obligation to monitor or investigate the lawfulness of the applications used by its customers. If any party contacts the Company with a substantial allegation that an application being used by a customer is unlawful, the Company will investigate the matter (including consultation, as it deems appropriate, with attorneys, consultants, federal or state regulators, and/or federal, state or local law enforcement agencies), and will take appropriate actions to deal with the use of applications that are demonstrated to be unlawful.

Customers may occasionally develop their own applications, or modify commercially available applications. The Company will not prohibit the use of customer-developed or modified applications unless there is a reasonable belief that such applications will cause harm to its network.

The Company does not block or rate-control specific protocols or protocol ports.

The Company does not modify protocol fields in ways that are not prescribed by the applicable protocol standards.

### *C. Device Attachment Rules*

The Company does not have any approval procedures that must be satisfied before a device can be connected to its network. Customers may use any lawful, compatible, type-accepted (if necessary) and commercially available device which they desire on the Company’s network, as long as such device does not harm the network.

The Company does not normally monitor the devices used by its customers. It warns customers that some types of devices (for example, Data Over Cable Service Interface Specification (‘DOCSIS’) devices intended for use on cable broadband networks) may not be compatible with its fiber optic and digital subscriber line (“DSL”) network.

The Company undertakes no obligation to monitor or investigate the lawfulness of the devices used by its customers. If any party contacts the Company with a substantial allegation that a device being used by a customer is unlawful, the Company will investigate the matter (including consultation, as it deems appropriate, with attorneys, consultants, federal or state regulators, and/or federal, state or

local law enforcement agencies), and will take appropriate actions to deal with the use of a device that is demonstrated to be unlawful.

Customers may occasionally develop their own devices, or modify commercially available devices.

The Company will not prohibit the use of lawful customer-developed or modified devices unless there is a reasonable belief that such devices will cause harm to its network.

#### *D. Security Practices*

The Company does not normally monitor the traffic of its customers. It undertakes no obligation to monitor or protect such customer traffic from spam, viruses, denial-of-service attacks, or other malicious, unlawful or unwanted activities.

The Company recognizes that customers can purchase spam filtering and anti-virus software from commercial vendors to meet their needs. The Company may from time to time offer anti-spam and/or anti-virus software or services to customers who desire to purchase them from the Company. When offered, these software or services will be described and priced in other sections of this website and in the Company's sales and marketing materials. Customers are free to obtain anti-spam and/or antivirus software or services from any source they desire, as long as such software or services do not disrupt or degrade the traffic of other customers of the Company or harm the network. A customer that is subjected to a denial-of-service attack, or similar malicious, unlawful or unwanted activity, is urged to notify the Company as soon as possible. The Company will work with the customer, other service providers, federal and state regulators, and/or law enforcement to determine the source of such activity, and to take appropriate, and technically and economically reasonable efforts to address the matter.

The Company employs commercially appropriate security procedures to protect its network and its customer records from unauthorized access by third parties. The Company does not guarantee that it can protect customers from any and/or all security breaches.

#### *E. Traffic Blocking*

The Company does not block any lawful content, applications, devices, and/or non-harmful devices.

The only potential exceptions where blocking may occur entail the unlawful or harmful circumstances set forth in Sections I.A through I.D above. The Company believes that all such circumstances constitute reasonable network management practices.

The Company does not knowingly and intentionally impair, degrade or delay the traffic on its network so as to render effectively unusable certain content, applications, services and/or nonharmful devices. However, the Company notes that congestion may from time to time impair, degrade, or delay some traffic.

The Company does not charge edge service providers of content, applications, services and/or devices any fees simply for transporting traffic between them and its customers.

## **II. Performance Characteristics**

Many of the service and performance characteristics of the Company's broadband Internet access services are contained in the service offering portions of this website. The Company offers different tiers of service at different prices, and changes these from time to time.

### *A. General Service Description*

The Company uses a hybrid fiber optic, copper digital subscriber line ("DSL"), and hybrid fiber coaxial network that reaches approximately 92% percent of the potential customers in its rural service area, and a fiber-to-the-home ("FTTH") network that reaches approximately 30% percent of such customers. The available access speeds in the DSL and hybrid fiber coaxial portions of the network range up to 100 megabits per second ("Mbps"), depending upon the actual lengths of the respective fiber trunks and copper lines. The available access speeds in the FTTH portion of the network range up to 1000 Mbps, depending upon the electronics installed.

Actual access speeds and time delays (latency) are impacted by the length, capacity and congestion of Middle Mile transport facilities (between the Company's service area and Internet nodes) as well as the characteristic of the Company's own network. Because conditions on these facilities and routes can change frequently, the Company can provide estimated actual access speed and latency information only for specific recent time periods.

### *B. Impact of Specialized Services*

The Company does not currently offer IP video services. The Company, through one of its affiliates provides IP based voice services to end-users.

### *C. Impact of Middle Mile Capacity Constraints*

The Company provides Middle Mile facilities for routes approximately 150 miles long between the Company's service area and the closest Internet nodes.

The Company cannot guarantee that it will be able to obtain additional Middle Mile capacity at commercially reasonable prices if and when needs for additional Middle Mile capacity arise.

## **III. Commercial Terms and Conditions**

The commercial terms and conditions of the Company's broadband Internet access services are contained in greater detail in the "terms and conditions" portions of this website. This section provides a brief overview or reference to terms and conditions detailed elsewhere, plus discussions of other terms and conditions required by the FCC's Open Internet Framework.

### *A. Pricing Terms and Conditions*

The Company offers different tiers and levels of service at different prices, and changes these from time to time. These service tiers and prices are detailed in the service offering portion of this website.

The Company does not impose usage-based fees upon certain tiers or levels of its service.

The Company may impose fees for early termination with respect to certain of its service arrangements. These early termination fees are imposed upon the service arrangements specifically identified in the “terms and conditions” section of the Company’s website in the manner and under the conditions set forth therein.

In addition, the Company is willing to consider and negotiate prices for customized additional network services requested by specific customers or edge service providers if such services can be designed, developed and furnished in a commercially reasonable manner. If and when such customized services are developed and furnished, the Company reserves the right to adapt and provide them to other customers on a non-discriminatory basis so long as such subsequent provision does not entail disclosure of proprietary or confidential information of the initial customer.

#### *B. No Unreasonable Discrimination*

The Company does not unreasonably discriminate in its transmission of traffic over the broadband Internet access services of its customers. It endeavors to give its customers as much choice and control as practicable among its different service offerings and among the content, application, service and device offerings of edge service providers. When reasonable network management practices entail differential treatment of traffic, the Company does not discriminate among specific uses, or classes of uses, of its network.

The Company does not impair, degrade or delay VoIP applications or services that compete with its voice services and those of its affiliates.

The Company does not impair, degrade, delay or otherwise inhibit access by its customers to lawful content, applications, services or non-harmful devices.

The Company does not impair free expression by actions such as slowing traffic from particular websites or blogs.

The Company does not use or demand “pay-for-priority” or similar arrangements that directly or indirectly favor some traffic over other traffic.

The Company does not prioritize its own content, application, services, or devices, or those of its affiliates.

#### *C. Privacy Policies*

As indicated above, the Company’s network management practices do not generally entail inspection of network traffic.

The Company retains and stores certain traffic information (such as the identity of the customer using a particular IP address during a specific period) for time periods required by federal or state law.

The Company retains, stores and provides to law enforcement any traffic information requested pursuant to the procedures of the Communications Assistance for Law Enforcement Act (“CALEA”), the Foreign Intelligence Surveillance Act (“FISA”) or other applicable national security or criminal statutes.

The Company does not collect, store or use traffic information to profile its customers in order to sell additional services to them, or for similar non-network management purposes.

#### *D. Redress Options*

Questions and complaints regarding the foregoing matters should be addressed to the Company’s Administration at (435)622-5007 or [company@stratanetworks.com](mailto:company@stratanetworks.com).

The Company strongly desires to resolve questions, complaints and other problems of its customers and edge service providers in an informal and direct manner that satisfies all interested parties to the greatest extent practicable.

Customers and edge service providers that are not able to obtain satisfaction from the Company have the option of invoking the FCC’s informal and formal complaint procedures regarding Open Internet Framework disputes.
